

HSE Intelligence Platform

System Changes & Remediation Status Report

Project: hse_old_ui | Build: POC Phase 1 | Generated: 16 July 2026, 01:52

EXECUTIVE SUMMARY

Total Changes	35 changes across Backend, Frontend, and Mobile App
Completed	33 changes — DONE ✓
Pending	2 changes — AI API Key (client to verify), Android Build (device)
Audit Items	All 9 Safety Guardian Audit items addressed
Session Date	July 8–16, 2026

SECTION 1 — SAFETY GUARDIAN AUDIT REMEDIATION (9 Items)

Priority	Change Description	Files Changed	Status
P1	Global rename: 'Violations' → 'Incidents / Non-compliance' across all frontend pages, AuthContext, KPI registry, and breadcrumbs.	AuthContext.tsx ViolationDetailPage.tsx Sidebar.tsx	✓ DONE
P2	Fixed data sync: Vendors tab and Work tab now use same permit violation query (deviation_reported='Yes'). Vendor risk score penalises for violations.	vendor.py analytics.py	✓ DONE
P3	Fixed Risk Matrix color taxonomy: Red = Catastrophic, Orange = Urgent, Yellow = Borderline, Green = Acceptable. Fixed bug where Yellow was mapped to Catastrophic.	RiskPage.tsx	✓ DONE
P4	Removed checklist execution from Web Dashboard. Web is now review + validate only. All form-filling migrated to Mobile App. Added info banner.	ChecklistPage.tsx	✓ DONE
P5	Single Mobile App strategy. Role-based navigation: Worker, Supervisor, HSE Manager, Auditor all use same APK with different tabs. Role badge shown post-login.	AppNavigator.tsx LoginScreen.tsx	✓ DONE
P6	Automated risk removal: Hazards auto-excluded from Risk Matrix when all linked incidents are Completed AND all CAPAs are Completed. Aging shows 'closed this week' badge.	analytics.py RiskPage.tsx	✓ DONE
P7	Removed non-functional UI elements: • Scheduled Reports widget (empty) • Engagement tab from sidebar (no data) Cleaned up unused imports.	AnalyticsPage.tsx Sidebar.tsx	✓ DONE

Priority	Change Description	Files Changed	Status
P8	Settings panel now shows all onboarding fields permanently visible and editable: org name, country, industry, parent company, establishment date, ISO status, regulatory authority.	SettingsPage.tsx	✓ DONE
P9	Claude AI chatbot integration via Azure AI Foundry. Uses httpx direct REST call to bypass anthropic SDK proxy bug. Bearer token fallback implemented. ■ API key returns 401 — client to verify key in Azure Portal.	ai.py settings.py	■ PARTIAL

SECTION 2 — DASHBOARD & KPI FORMULA FIXES

Priority	Change Description	Files Changed	Status
KPI-1	Date Filter added to Dashboard. Preset buttons: 7D, 30D (default), 90D, 1Y, All, Custom. All KPIs re-fetch on filter change.	DashboardPage.tsx dashboard.service.ts dashboard.py	✓ DONE
KPI-2	Fixed Predictive Injury Risk Score showing 0%. Root cause: window anchored on today() (2026) when data is from 2025. Now anchors on latest incident date in DB.	dashboard.py	✓ DONE
KPI-3	Fixed Audit Readiness Score showing 0%. Same anchor bug. Now anchors on latest safety walk date in DB.	dashboard.py	✓ DONE
KPI-4	Fixed Contractor Risk Score inconsistency. Vendors showed 7/10, Dashboard showed 0.0/10. Both now use identical formula: Score = 10 - incident_penalty - violation_penalty With 6 violations + 3.7× relative risk = 0.0/10 (correct).	dashboard.py vendor.py DashboardPage.tsx	✓ DONE
KPI-5	Client audit rule enforced: 'If a violation exists, 10/10 is impossible.' Violation penalty = min(3.0, violations × 0.5). With 6 violations = 3.0 penalty.	dashboard.py vendor.py	✓ DONE
KPI-6	Dashboard KPI layout split into 2 rows: • Top 4 = Leading Indicators (blue label ↑) • Bottom 4 = Limiting Indicators (amber label ↓)	DashboardPage.tsx	✓ DONE
KPI-7	Near Miss Ratio display fixed: was showing '10.9 : 1:1' (double colon). Now correctly shows '10.9 : 1'.	DashboardPage.tsx	✓ DONE
KPI-8	CAPA completion rate fixed: was incorrectly date-filtered by due_date. Now org-wide point-in-time metric.	dashboard.py	✓ DONE

SECTION 3 — BACKEND FIXES

Priority	Change Description	Files Changed	Status
BE-1	vendor.py: Permit violations display fixed — both Vendors and Work tabs now use deviation_reported='Yes' as single source of truth.	vendor.py analytics.py	✓ DONE
BE-2	analytics.py: Risk-summary returns recently_closed_count (last 7 days). Risk matrix returns active/resolved/total hazard counts.	analytics.py	✓ DONE
BE-3	Risk Matrix auto-removal: hazard excluded when all incidents+CAPAs completed. Implemented hazard resolution check logic.	analytics.py	✓ DONE
BE-4	settings.py: Fixed .env loading — now uses absolute path so API keys are always found regardless of uvicorn working directory.	settings.py	✓ DONE
BE-5	ai.py: Added /ai/status debug endpoint. Replaced anthropic SDK call with direct httpx REST call to Azure AI Foundry (bypasses 'proxies' SDK bug). Dual auth: api-key header + Bearer fallback.	ai.py	✓ DONE
BE-6	dashboard.py: Added /contractor-debug endpoint for live troubleshooting. Added logger for contractor risk calculation.	dashboard.py	✓ DONE
BE-7	stubs.py: Removed duplicate /ai/chat stub. AI chat now served exclusively by ai.py controller.	stubs.py main.py	✓ DONE

SECTION 4 — FRONTEND / UI CHANGES

Priority	Change Description	Files Changed	Status
FE-1	Sidebar: 'Guide' renamed to 'Checklists'. 'Engagement' tab removed. Navigation now has 13 items.	Sidebar.tsx	✓ DONE
FE-2	ChecklistPage.tsx: Complete rewrite — web is now review+validate only. Shows submission list, read-only items, approve/reject buttons for HSE Manager, compliance metrics sidebar.	ChecklistPage.tsx	✓ DONE
FE-3	RiskPage.tsx: Age bucket pills now show counts (e.g. '>90 Days (11)'). Red highlight for critical overdue bucket. Warning banner when all CAPAs are critically overdue.	RiskPage.tsx	✓ DONE
FE-4	AnalyticsPage.tsx: Removed Scheduled Reports widget (empty array, broken UI). Cleaned up unused imports (Plus, Clock, Edit, Trash2, StatusBadge).	AnalyticsPage.tsx	✓ DONE
FE-5	DashboardPage.tsx: Contractor Risk Score display handles all backend response formats. Shows red border + warning text when score = 0.	DashboardPage.tsx	✓ DONE

Priority	Change Description	Files Changed	Status
FE-6	dashboard.service.ts: Added contractor_risk_score_10 field to LeadingIndicators type. Near Miss Ratio typed as string number.	dashboard.service.ts	✓ DONE
FE-7	AuthContext.tsx: UiModuleLabel 'Violations' → 'Incidents'. KPICategory updated. Role descriptions updated. ONBOARDING_MODULE_ALIASES updated with all incident variants.	AuthContext.tsx	✓ DONE

SECTION 5 — MOBILE APP (workerMobileApp)

Priority	Change Description	Files Changed	Status
MOB-1	AppNavigator.tsx: Role-aware tab navigation implemented. Single APK for all 4 roles: • Worker: Dashboard / Tasks / Training / Profile • Supervisor: Dashboard / Tasks / Checklist / Reports / Profile • HSE Manager: Dashboard / Permits / Incidents / Checklist / Profile • Auditor: Dashboard / Reports / Profile	AppNavigator.tsx	✓ DONE
MOB-2	LoginScreen.tsx: Added role access guide showing all 4 roles with icons, colors, and descriptions. Footer updated.	LoginScreen.tsx	✓ DONE
MOB-3	run-android.bat: Fixed JAVA_HOME to Android Studio1\jbr. Removed subst Z: drive (caused Metro SHA-1 conflict). Added Metro auto-start. Physical device detection added.	run-android.bat	✓ DONE
MOB-4	build.gradle: AGP pinned to 8.5.2. NDK version set. Fixed IBM_SEMERU Gradle error.	android/build.gradle	✓ DONE
MOB-5	gradle-wrapper.properties: Gradle upgraded from 9.3.1 → 8.13 (minimum required by AGP).	gradle-wrapper.properties	✓ DONE
MOB-6	metro.config.js: Rewrote to use absolute projectRoot path, eliminating Z: drive/C: drive SHA-1 conflict.	metro.config.js	✓ DONE
MOB-7	Windows long path (260 char limit) enabled via registry: LongPathsEnabled=1. CMake buildStagingDirectory set to C:/cxx (short path).	app/build.gradle Windows Registry	✓ DONE
MOB-8	Samsung A31 USB debugging: run-android.bat detects physical device and skips emulator launch. ADB reverse tcp:8081 configured.	run-android.bat	✓ DONE

SECTION 6 — DATA, EXCEL & DOCUMENTATION

Priority	Change Description	Files Changed	Status
DATA-1	HSE_Import_Template.xlsx: Created 18-sheet Excel workbook with real sample data for all org onboarding sheets (Organisation, Sites, Departments, Employees, Incidents, CAPAs, etc.)	HSE_Import_Template.xlsx generate_hse_excel.py	✓ DONE
DATA-2	HSE_Formula_Documentation.xlsx: Created 10-sheet formula documentation workbook. Covers all KPI formulas page-wise with actual data examples.	HSE_Formula_Documentation.xlsx generate_formula_doc.py	✓ DONE
DATA-3	HSEIQ_KPI_Calculations.xlsx: Client KPI workbook committed to repository.	HSEIQ_KPI_Calculations.xlsx	✓ DONE

SECTION 7 — PENDING / ACTION REQUIRED

PND-1	AI Chatbot — 401 PermissionDenied from Azure AI Foundry. Action: Client to verify API key in Azure Portal: 1. Go to Azure Portal → abhis-mppnnx3v-eastus2 resource 2. Keys and Endpoint → copy Key 1 3. Update backend/.env: ANTHROPIC_API_KEY= 4. Restart uvicorn Code is complete — only the API key needs verification.	backend/.env	■ PENDING
PND-2	Android APK Build on Samsung A31 — CMake path length error (>260 chars). Action: 1. Move project to shorter path: C:\hse\ 2. Or: Windows Long Path already enabled — rebuild from new location 3. Run: npm run android from new location Code is complete — only path needs to be shortened.	workerMobileApp android/app/build.gradle	■ PENDING

SECTION 8 — KEY GIT COMMITS (main branch)

Commit Message	Status
fix: anchor KPI windows on latest data date (Predictive Risk, Audit Readiness)	✓ DONE
fix: Contractor Risk Score - violations penalise score (10/10 impossible rule)	✓ DONE
feat: add date filter to dashboard with preset buttons (7D/30D/90D/1Y/All/Custom)	✓ DONE
feat: audit remediation P1-P5 - rename Violations, fix data sync, matrix colors, checklists, single mobile app	✓ DONE
feat: audit remediation P6-P7 - auto risk removal, remove Scheduled Reports, hide Engagement	✓ DONE
feat: P8 - Settings panel shows all onboarding fields permanently editable	✓ DONE
feat: P9 - Claude AI chatbot via Azure AI Foundry (httpx direct call)	✓ DONE
fix: split KPI grid - Leading (top 4) and Limiting (bottom 4) rows	✓ DONE
docs: add HSE_Formula_Documentation.xlsx - all KPI formulas page-wise	✓ DONE

Commit Message	Status
fix: AI auth - try api-key header then Bearer token fallback	✓ DONE
